```python
    def set_length(self,width,height):
        self.__width = width
        self.__height = height

    def get_length(self):
        return self.__width, self.__height

    def area_rectangle(width,height):
        if width<=0 or height<=0 : raise ValueError
        return width * height

    def area_ellipse(width,height):
        if width<=0 or height<=0 : raise ValueError
        return width*height*math.pi

    def area_right_triangle(width,height):
        if width<=0 or height<=0 : raise ValueError
        return width * height /2
```

```python
import figure
myline = figure.line(10,20)

width, height = myline.get_length()
try :
    rectangle = figure.area_rectangle(width,height)
    print(rectangle)
except ValueError:
    print("Error")
```
